

Sliding Track Center Installation

Instructions:

1. Layout and identify all parts - see Parts Layout Identification Sheet. The unit is already partially assembled to ease on-site installation. Assembly steps include:
 - a. Mount fixed back panel to wall
 - b. Align and mount hanging clips to wall studs
 - c. Mount back panel jam trim and frame to clips
 - d. Screw frame to clips
2. Mount the fixed panel to the wall using egg sized globs of adhesive spaced approximately 16" on centers. You will need to temporarily fasten the panel to the wall (until the adhesive dries) using temporary screws near the edges of the panel. Be certain the panel is level.
3. Mount the top and bottom 2" mounting clips to the wall using fasteners appropriate for your wall construction on 12" centers. Note on the drawing the clearances shown between the top and bottom edges of the fixed back panel and the clips. Be sure the clips are level.
4. Tighten the nuts on the roller assemblies at top of the sliding panels (if not already tight).
5. Position frame assembly over the clips, drill 9/64" diameter holes through the frame into the clips and use the provided screws to secure the frame into place. Note that the sliding panels can be removed by loosening the roller panel to allow tilting the base. Reverse the process to re-install.
